Below: API-6FA firesafe test in process at Anderson & Associates in Houston, Texas.

Lower Right: Successfully completed fire-safe test.

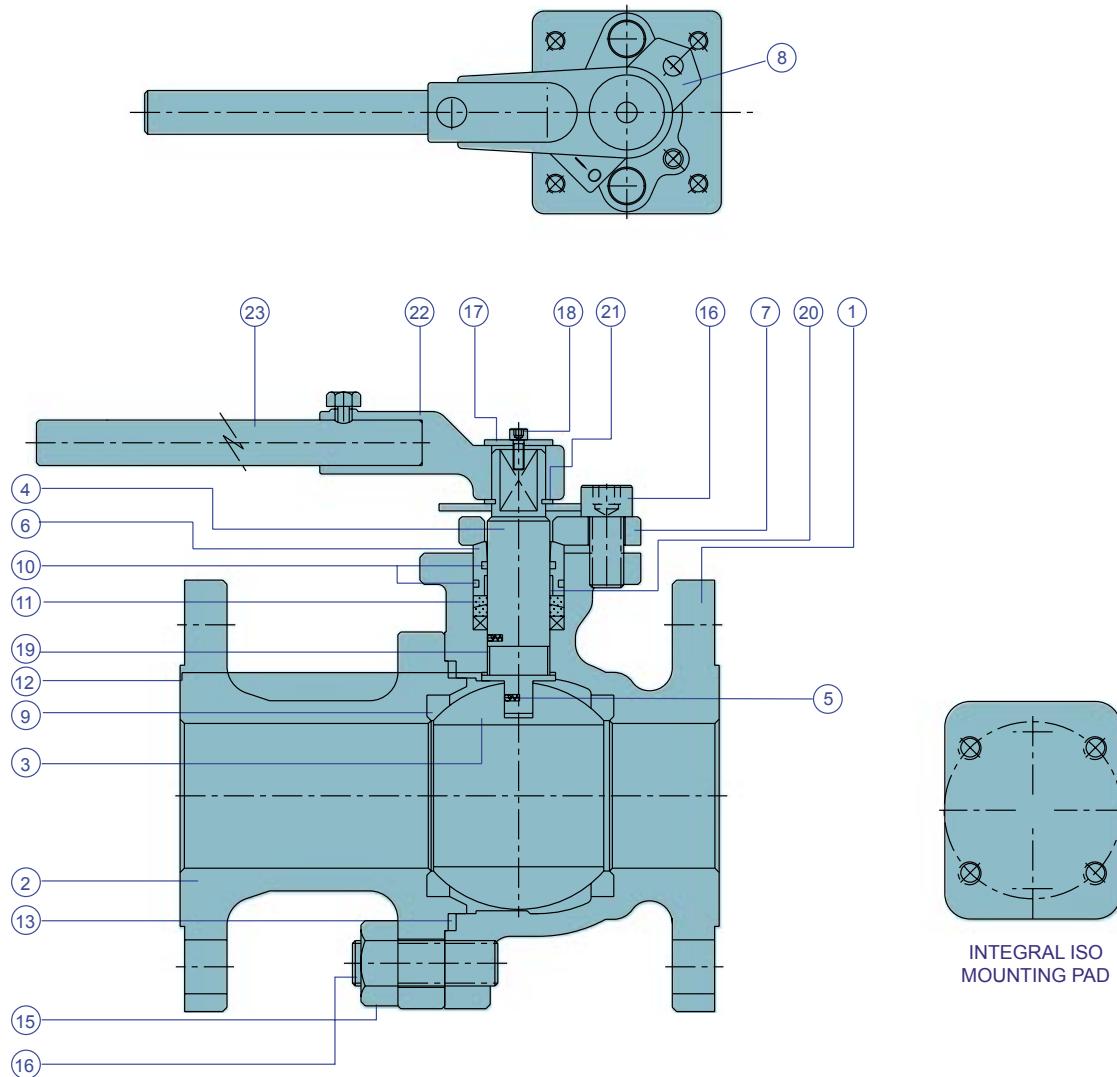

STANDARD FEATURES - STANVAL Split Body Ball Valves

The STANVAL SPLIT BODY ball valves are designed, constructed and tested according to the most recent international standards, such as API, ASME, BS, DIN, etc.

- 1 & 2. Body (1) & Cap (2) are manufactured through our in-house casting systems and made out of Carbon Steel & Austenitic Stainless Steel. These materials are in full compliance with NACE-MR-01-75. Special materials can be supplied upon request.
- 3. Precision machined balls to 4RMS provides superior quality with low torque and no leakage.
- 4. Parallel Flat Stem – The blow-out proof stem prevents the media from blowing out from pressure within the body cavity.

- 5. Anti-Static Ball (see page 6, Figure 1)
- 6. Gland Bushing
- 7. Gland
- 8. Combination Lock Stop
- 9. Cavity Relieving Seat – The seat is carefully designed in such a way that no excessive pressure can be built up in the cavity under temperature fluctuations (see page 6, Figure 2)
- 10 & 11. Combination O-Ring (10) and Gland Packing (11) – Flexible graphite packing further assures prevention of leakage when exposed to a fire (see page 6, Figure 3)
- 12. Back Seat
- 13. Spiral Wound Gasket
- 14. Body Stud Bolt
- 15. Nut
- 16. Gland Bolt
- 17. Stem Washer
- 18. Stem Bolt
- 19. Stem Bushing
- 20. Gland Bearing
- 21. Snap Ring
- 22. Handle
- 23. Handle Bar
- 24. Split Body Construction with positive alignment and bolted design (see page 6, Figure 4)
- 25. Integral ISO Mounting Pad

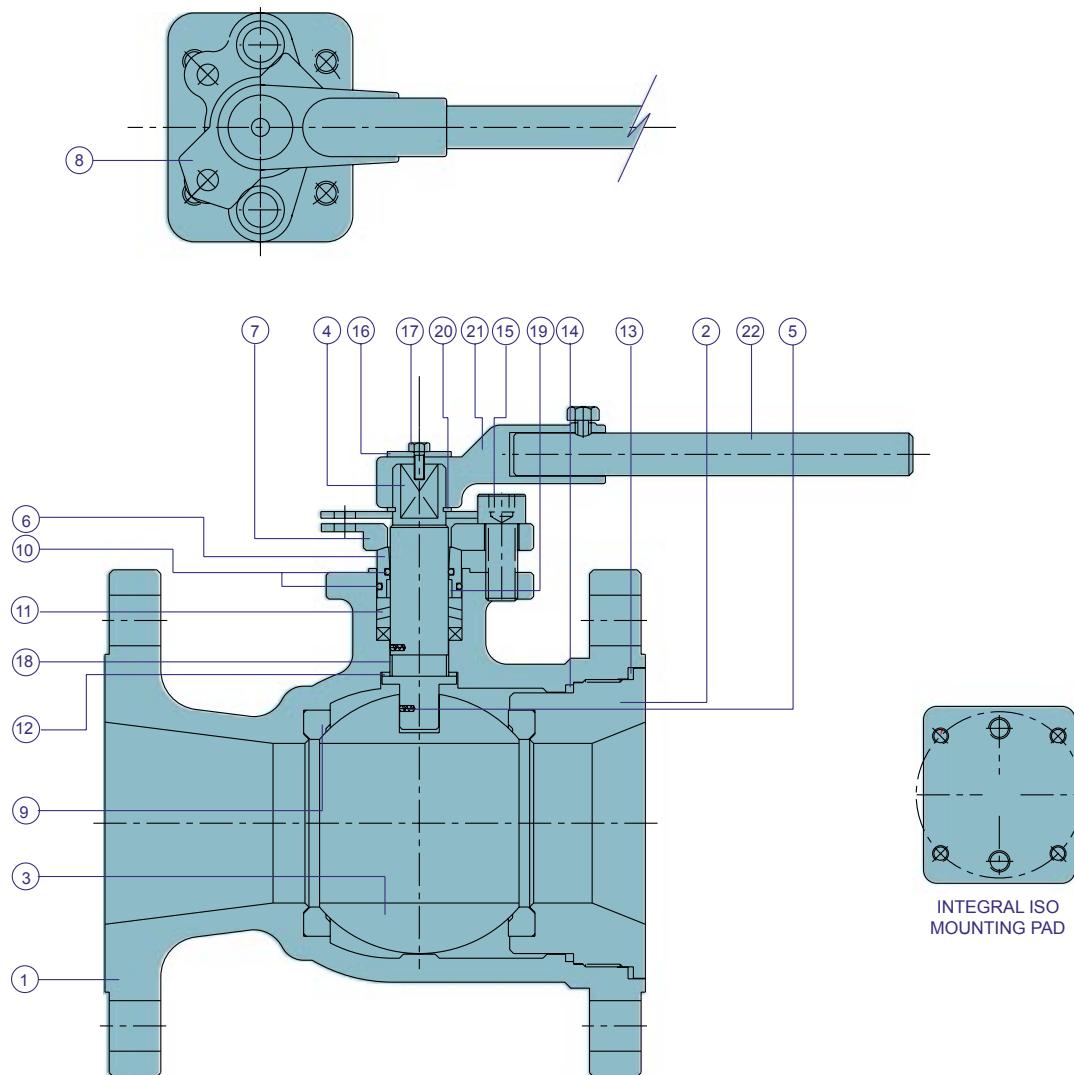

STANDARD FEATURES - STANVAL Unibody Ball Valves

The STANVAL UNIBODY ball valves are designed, constructed and tested according to the most recent international standards, such as API, ASME, BS, DIN, etc.

- 1 & 2. Body (1) & Retainer (2) are manufactured through our in-house casting systems and made out of Carbon Steel & Austenitic Stainless Steel. These materials are in full compliance with NACE-MR-01-75. Special materials can be supplied upon request.
3. Precision machined balls to 4RMS provides superior quality with low torque and no leakage.
4. Parallel Flat Stem – The blow-out proof stem prevents the media from blowing out from pressure within the body cavity.

5. Anti-Static Ball (see page 6, Figure 1)
6. Gland Bushing
7. Gland
8. Combination Lock Stop
9. Cavity Relieving Seat – The seat is carefully designed in such a way that no excessive pressure can be built up in the cavity under temperature fluctuations (see page 6, Figure 2)
- 10 & 11. Combination O-Ring (10) and Gland Packing (11) – Flexible graphite packing further assures prevention of leakage when exposed to a fire (see page 6, Figure 3)
12. Back Seat
13. Graphite Gasket
14. PTFE Gasket
15. Gland Bolt
16. Stem Washer
17. Stem Bolt
18. Stem Bushing
19. Gland Bearing
20. Snap Ring
21. Handle
22. Handle Bar
23. STANVAL's unique double sealing design:
Primary Seal – PTFE
Secondary Seal – Graphite
(see page 6, Figure 5)
24. Integral ISO Mounting Pad

SAFETY FEATURES - STANVAL Split Body & Unibody Ball Valves

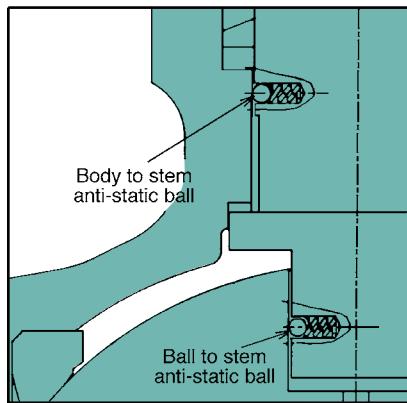

Figure 1
Ball valves present a particular problem with the build up of static electricity around the ball. All STANVAL ball valves have anti-static devices which provides contact between stem and ball, and stem and body to eliminate static electricity.

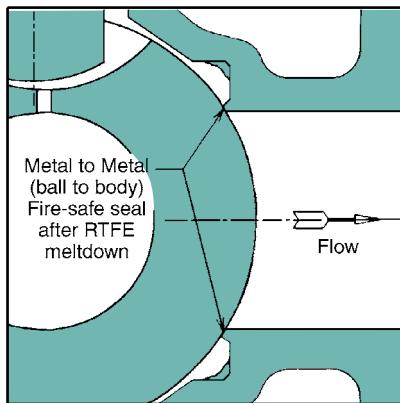

Figure 2
In the event of a fire the valve is required to make a downstream seal. Even after the disintegration of the RTFE seats, STANVAL ball valves have an excellent metal to metal seal.

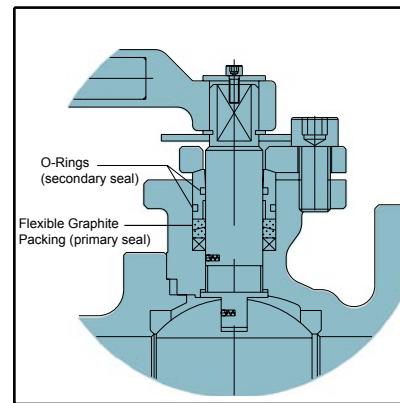

Figure 3
The combination of stem packing and o-rings guarantee zero omissions even at low pressure. The primary seal is made out of flexible graphite, a material with extremely good resistance to fire conditions. The anti-blow out stem is inserted from inside the valve body.

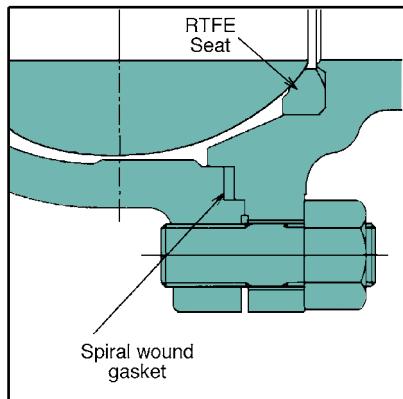

Figure 4
Special attention has been paid to the mechanical strength and sealing efficiency of the central flanged joint in the valve body.

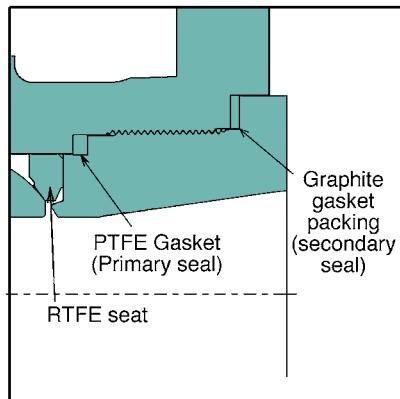

Figure 5 (unibody only)
The PTFE gasket packing acts as a primary seal for the Unibody ball valves. The secondary seal has been made out of flexible graphite, a material with extremely good resistance to fire conditions.

STANDARD FEATURES - STANVAL Three-Piece Trunnions

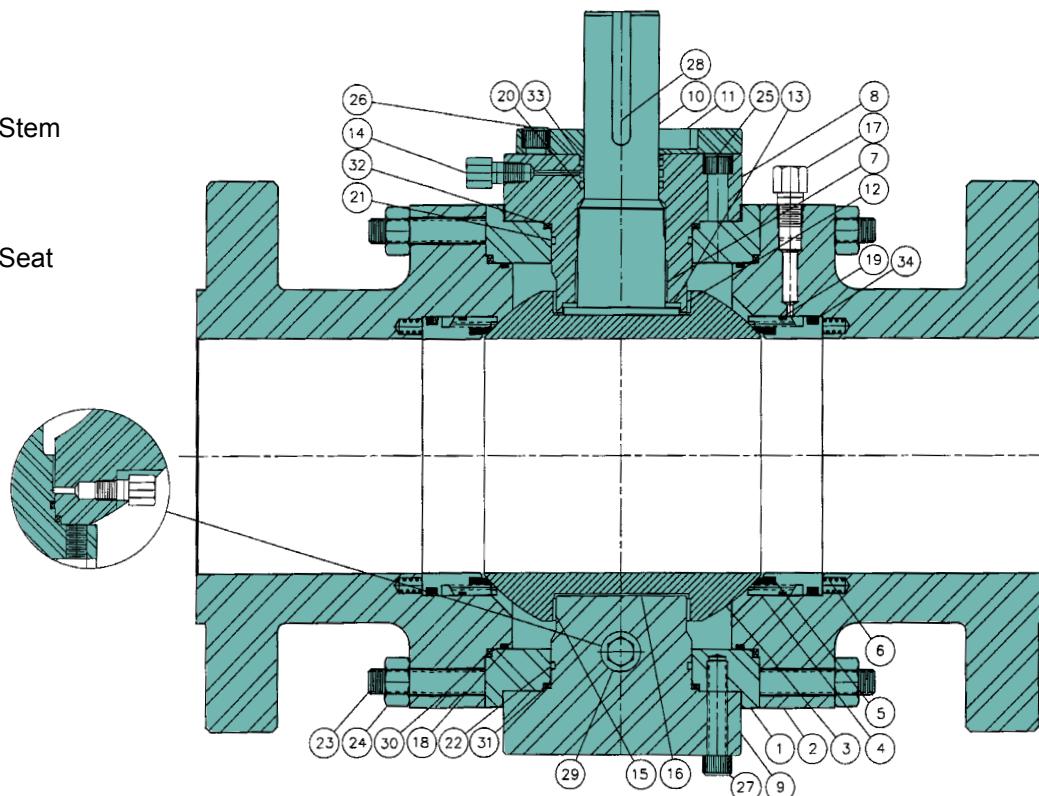

The STANVAL THREE-PIECE TRUNNION MOUNTED ball valves are designed, constructed and tested according to API-6D. The full range of STANVAL Trunnion Ball Valves are supplied standard in full compliance with NACE MR-01-75.

1. Body
2. Cap
3. Ball
4. Seat Assembly
5. Seat Insert
6. Seat Spring
7. Stem Bearing
8. Upper Trunnion
9. Lower Trunnion
10. Stem
11. Stop Plate
12. Gland Bushing
13. Thrust Washer
14. Sealant Injection Fitting, Stem
15. Trunnion Bushing
16. Trunnion Thrust Washer
17. Sealant Injection Fitting, Seat
18. Body O-Ring Seal
19. Seat O-Ring
20. Stem O-Ring
21. Gland O-Ring
22. Trunnion O-Ring
23. Stud Bolt
24. Nut
25. Cap Screw Gland
26. Cap Screw Plate
27. Cap Screw Trunnion
28. Key
29. Bleed Fitting

STANVAL three-piece standard trunnion mounted ball valves are furnished with the following fire-safe materials:

30. Graphite Body Gasket
31. Graphite Trunnion Gasket
32. Graphite Gland Gasket
33. Graphite Stem Gasket
34. Graphite Seat Seal

STANVAL ball valves have been developed for oil and gas pipelines, and process industry use according to API-6D standards.

Figure 1

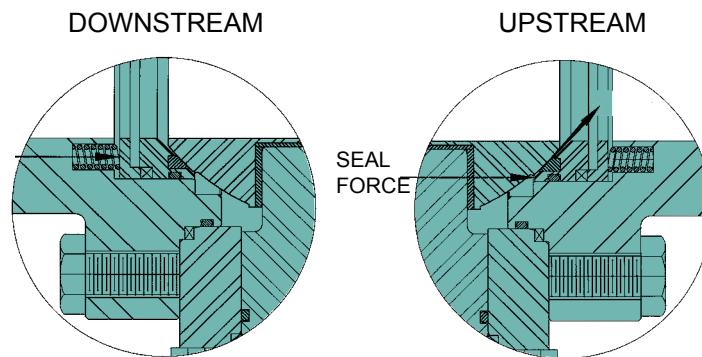

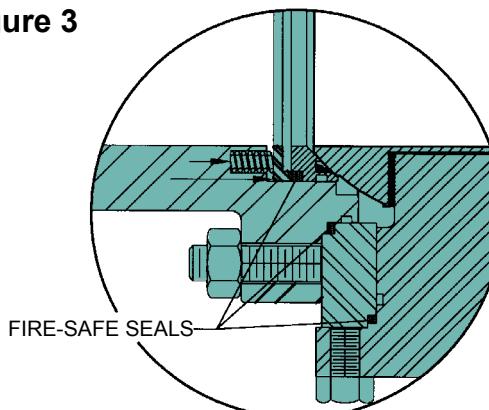

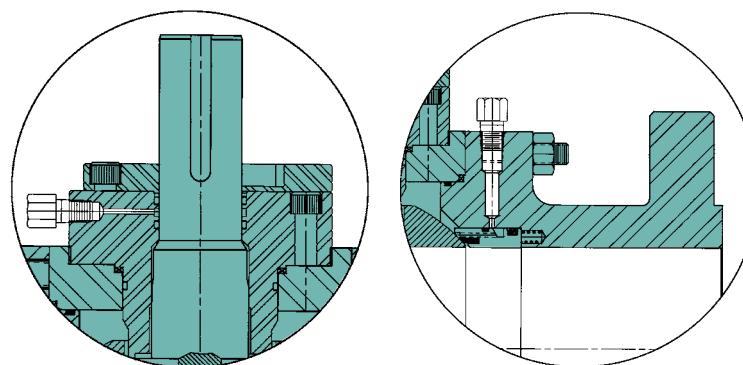

STANDARD FEATURES - STANVAL Three-Piece Trunnions (cont.)**Double Block and Bleed**

STANVAL Model FF and GG type ball valves have a sealing system which allows installation and service requiring double block and bleed.
(Figure 1)

Sealing Feature

All Model FF and GG type ball valves utilize the differential between the sealing diameter of the seat insert/ball contact and the outer diameter of the seat. The difference between these areas times the line pressure is the sealing force. When line pressure is so low that the force generated by the different diameters cannot seal, the seat springs provide the force.

(Figure 2)

Figure 2**Figure 3****Figure 4****Injection Sealant Feature**

The full range of Model FF and GG are supplied with a standard stem sealant injection fitting. Seat sealant fittings are also standard on the 6" and larger valves. These sealant fittings can be used to provide a temporary seal in the event of damage incurred from fire or line media contamination.

(Figure 4)

STANDARD FEATURES - STANVAL Split Body Trunnions

The STANVAL SPLIT BODY TRUNNION MOUNTED ball valves are designed, constructed and tested according to API-6D. The full range of STANVAL Trunnion Ball Valves are supplied standard in full compliance with NACE MR-01-75.

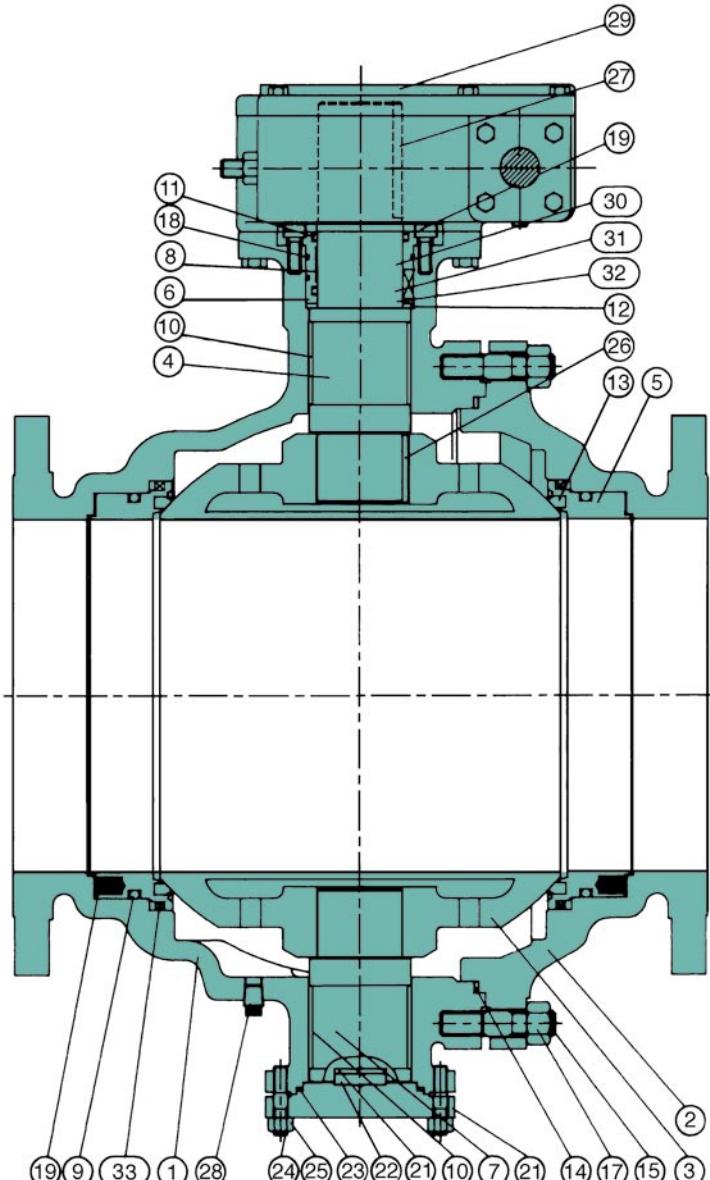

- 1 & 2. Body (1) & Cap (2)
- 3. Precision machined ball with outstanding smoothness provides superior quality with low torque and no leakage operation.
- 4. Heavy Duty Stem.
- 5. Floating Seat Retainer
- 6. Gland
- 7. Lower Stem
- 8. PTFE Gland Bearing
- 9. VITON Seat Retainer O-Ring.
- 10. PTFE Stem Bearing
- 11. VITON Stem O-Ring
- 12. PTFE Thrust Bearing
- 13. Ball Seat
- 14. Graphite Body Gasket
- 15. Body & Cap Joint Stud Bolt
- 16. Gland Bolt
- 17. Body & Cap Joint Nut
- 18. Gland O-ring
- 19. Seat Retainer Spring
- 20. Bottom Cover
- 21. PTFE Thrust Bearing
- 22. Low Stem Pivot Washer
- 23. Graphite Bottom Cover Gasket
- 24. Bottom Cover Joint Stud Bolt
- 25. Bottom Cover Joint Nut
- 26. Ball & stem Joint Key
- 27. Stem & Manual or Automatic Operator Joint Key
- 28. Drain Hole Plug
- 29. Manual Worm Gear Operator

STANVAL split body standard trunnion valves are furnished with the following fire-safe materials:

- 30. Gland
- 31. GRAPHITE Gland Packing
- 32. Metal Thrust Washer
- 33. GRAPHITE Seat Retainer Seal

STANVAL ball valves have been developed for oil and gas pipelines, and process industry use according to API-6D standards.

Figure 1

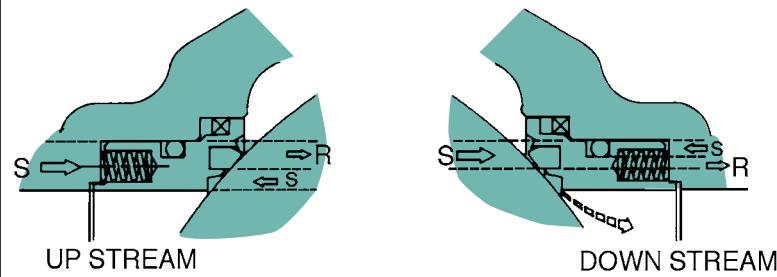

STANDARD FEATURES - STANVAL Split Body Trunnions (cont.)**Double Block and Bleed**

STANVAL Model F and G type ball valves have a sealing system which allows installation and service requiring double block and bleed.
(Figure 1)

Sealing Feature

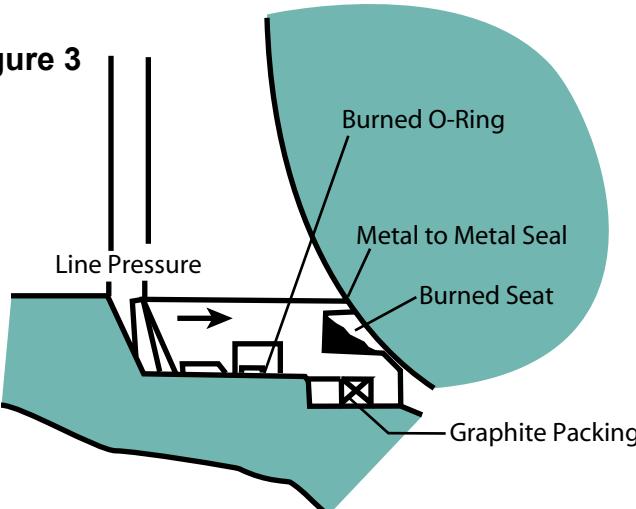

All Model F and G type ball valves are supplied with spring loaded seats to ensure that the seats are always in contact with the ball, providing a very efficient seal even at low line pressure. When the line pressure increases, the seat is forced into tighter contact with the ball providing a positive shut-off.

(Figure 2)

Figure 2**Fire Safe Design Feature**

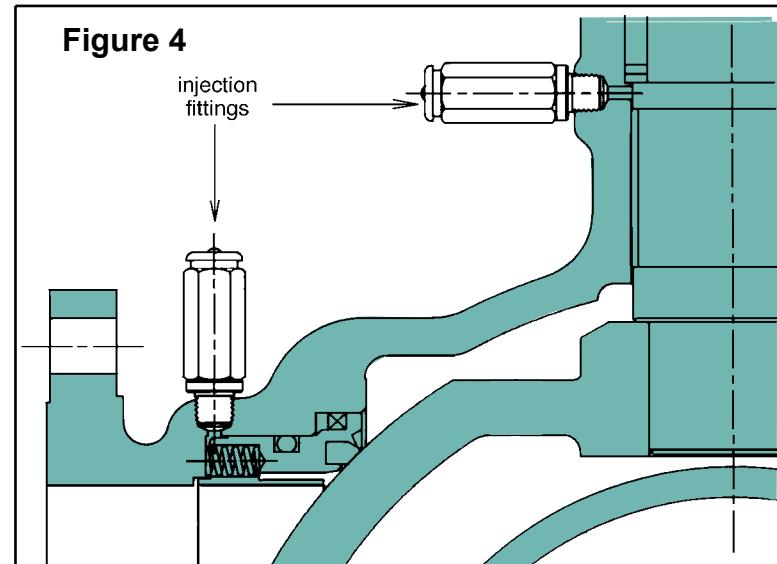

A secondary metal seat is provided to maintain contact between the seat and ball in the event the primary non-metallic seat is destroyed by fire. F and G model valves are fire-safe by design. The double body and bonnet seals give maximum security. STANVAL valves are fitted with special graphite seals so as to effectively stop all leakage in the event of a fire. All STANVAL Model F and G Trunnion Mounted ball valves have been tested to API-607/API-6FA.

(Figure 3)

Figure 3**Secondary Seat and Stem Sealing Option**

F and G type ball valves are designed to provide high integrity shut-off. Upon request, sealant injection fittings are available for F and G type. In case of seat insert or stem seal damage, external or internal leakages can occur. An emergency sealant injection can save the integrity of the valve by incorporating a sealant seal around the stem or between the seat and the ball.

(Figure 4)

MODEL DW101

Construction:	Three piece body, full bore, free floating ball, blow-out proof stem, investment cast, locking device.
Options:	Socket weld ends, butt weld ends
End to End:	STANVAL Standard
End Threads:	ASME B2.1 NPT
Socket Weld Ends:	ASME B16.11
Butt Weld Ends:	ASME B16.9
Rating:	1/4"-2" 1000 WOG

Standard Materials

Figure Number	DW101-3-BC-R-L	DW101-3-LC-R-L
Body/Cap	A216 WCB	A351 CF8M
Ball/Stem	A351 CF8M/316SS	A351 CF8M/316SS
Seats	RTFE	RTFE
Seals	PTFE	PTFE
