- (blank) - Lever
- GO - Gear Operator
- B - Bare Stem

### 10. SPECIAL REQUIREMENTS

- S - Supply complete information

## STANDARD ACTUATOR TYPE

### MANUAL GEAR OPERATION

STANVAL valves adopt a worm gear operation served as a standard of STANVAL Valve International. This type of valve has advantages of large output and easy operation due to high gear ratio, so that it is used extensively for quarter turn valves. The gear constructed by self-locking mechanism is suitable for triple offset valves which require torque seating. Clockwise turning of the handwheel makes the valve closed and counterclockwise turning makes the valve opened.

### ELECTRIC MOTOR ACTUATOR OPERATION

This valve is operated by an electric signal coming from the electric motor to open, close, or stop the valve in the process of operation. The position limit switch or torque switch signals stop at full open or close. The electric motor actuator is applied mainly to large size or high pressure valves because of greater torque over pneumatic actuator.

This type has advantages of simple wiring and good response. In addition, a remote control is available, and therefore the valve can be applied to a dangerous or limited space where it is difficult to access.

### PNEUMATIC ACTUATOR OPERATION

This type of valve is operated by a signal of air pressure, which is normally 2~9 kgf/cm<sup>2</sup> in control parts. There are two operating methods: single acting and double acting.

The single acting actuator is divided into full close and full open according to spring acting orientation. It is useful for control valve by virtue of its characteristics of safety and easy handling.

Furthermore, the construction is more responsive than electric motor or hydraulic actuator. The double acting actuator is served as STANVAL standard with air regulator, solenoid valve, and position indicator types. However, STANVAL is able to make whatever the customer need.

# SPECIFICATIONS—TRIPLE OFFSET METAL SEAT

## DESIGN FEATURE

- Designed in accordance with ASME B16.34 or other customer requirements.
- Fire safe design.

## DESIGN PRINCIPLES—TRIPLE OFFSET METAL SEAT

### TRIPLE OFFSET DESIGN PRINCIPLES

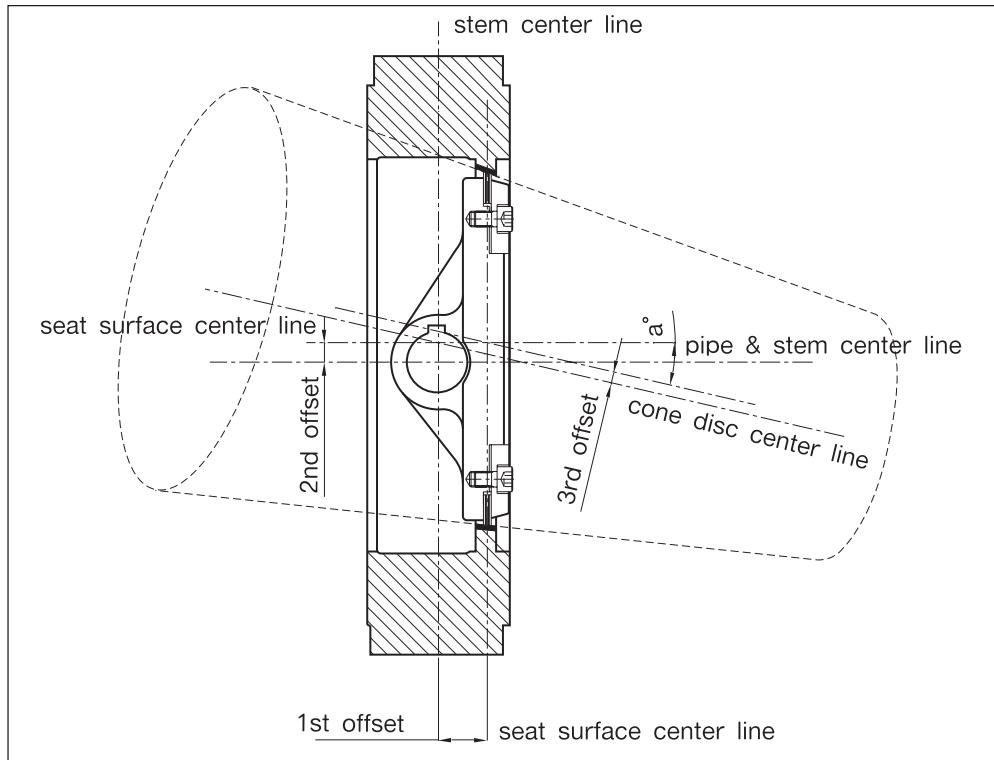

STANVAL Valve International triple offset metal seat butterfly valves provide a bi-directional and bubble-tight shutoff which is attributed to the geometry of triple offset seat.

The valve stem is offset by seat (1st offset) and the valve seat surface center line is offset against the center line of pipe (2nd offset) and the conical axis is offset by valve center line (3rd offset: inclined cone). The 3rd offset completely eliminates rubbing.

The seat surfaces of body and seal ring in triple offset valve contact with the inclined "cone-in-cone" and this design requires excellent sealing and seat part durability by slight wedging effect.

In addition, the angle of contact between body and seal ring has a good sealing performance by low torque because the angle travels the initial torque from actuator to seat parts without any loss by jamming.

This valve is characteristic of concentric, offset and double offset construction with remarkable sealing performance and seat part durability, and moreover it hardly ever needs repair.

### CHARACTERISTICS AND MERITS

- Excellent durability of seat part and low operating torque by non-rubbing characteristics with triple offset construction.
- Bi-directional zero leakage service by resilient metal sealing and torque seating.
- Unrestricted selection of face to face dimensions for API, ASME (ANSI), BS, ISO, etc. and perfect interchangeability of gate, ball, plug, high performance butterfly, and other valves.
- Low emission by quarter turn construction and good performance at automation by virtue of low operating torque and low cost.

## COMPONENT CHARACTERISTICS

### BODY

- The valve body shall be one piece cast or fabrication.
- The body can be supplied with different types of materials in wafer, lug, or flanged and butt welding end connections to satisfy all installation requirements.

### BODY SEAT

- The valve seat shall be integrated with the body.
- Stellite or stainless steel shall be applied on the seating surfaces of valve body.
- The valve seat is designed for inclined cone to ensure non-rubbing, non-jamming, bi-directional shutoff, and zero leakage.

### DISC

- The valve disc shall be the same material as the valve body. It is supported by a laminated seal ring, which is kept in place by a seat retainer ring bolted to the disc and can be replaced easily.
- The spiral wound gasket shall be provided between laminated seal ring and disc.

### SEAL RING (LAMINATED)

- The seal ring shall be resilient stainless steel lamella alternated by graphite, aramid fiber and ceramic fiber layers.
- The surface contacting between seal ring and body seat is an inclined cone type and the inclined angle generates a slight wedging effect.
- With a seat retainer ring bolted to the disc, the seal ring is fixed to disc not too tightly to be replaced easily.

### STEM

- The stem shall be stainless steel and one piece and two piece construction.
- The stem shall be fixed to the disc by pin or in combination of pin and key. It can be protected by internal thrust bush and bush bearing.
- The thrust bush and bush bearing shall be provided to locate the valve disc in a proper position.
- The retainer ring shall be installed to avoid blowing out the stem.

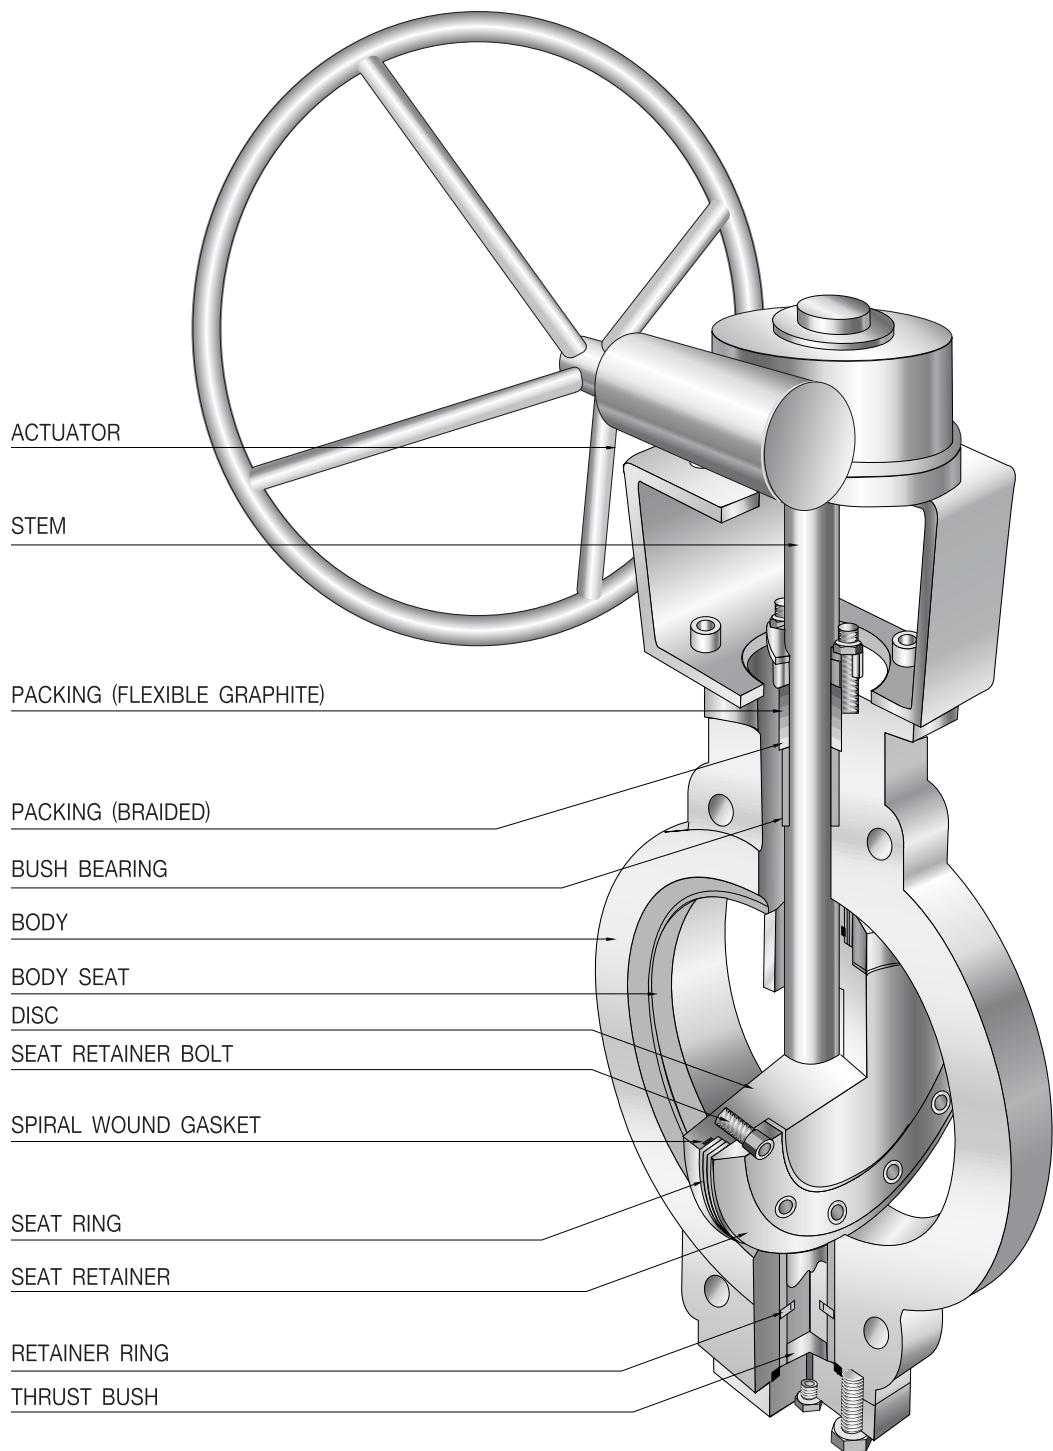

### PACKING

- The packing shall consist of two braided rings in the top and bottom of valve and three die formed graphite rings in the middle.
- The lantern ring may be provided as required by customer.

### ACTUATORS

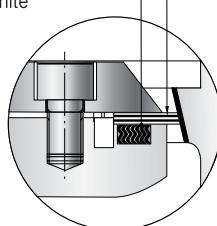

- All valves shall be self-locking manual gear operation type which is served as standard.
- Electric, pneumatic or hydraulic actuator may be provided as required by customer.

#### NOTE:

(1) For weld valve only, the temperature rating of flanged end terminates at 538°C

### FLOW DATA

Valve flow coefficient Cv is defined as the flow of water at 60°F in gallons per minute (GPM) at a pressure of one pound per square inch (1 psi) across the valve.

$$Q = Cv \sqrt{(\Delta P (62.4/\rho))}$$

### WHERE

$Q$  = Flow rate (GPM)

$Cv$  = Flow coefficient

$\Delta P$  = Pressure drop (psi)

$\rho$  = Density of fluid ( $\rho = 62.4$ , water at 60°F)

### THEREFORE

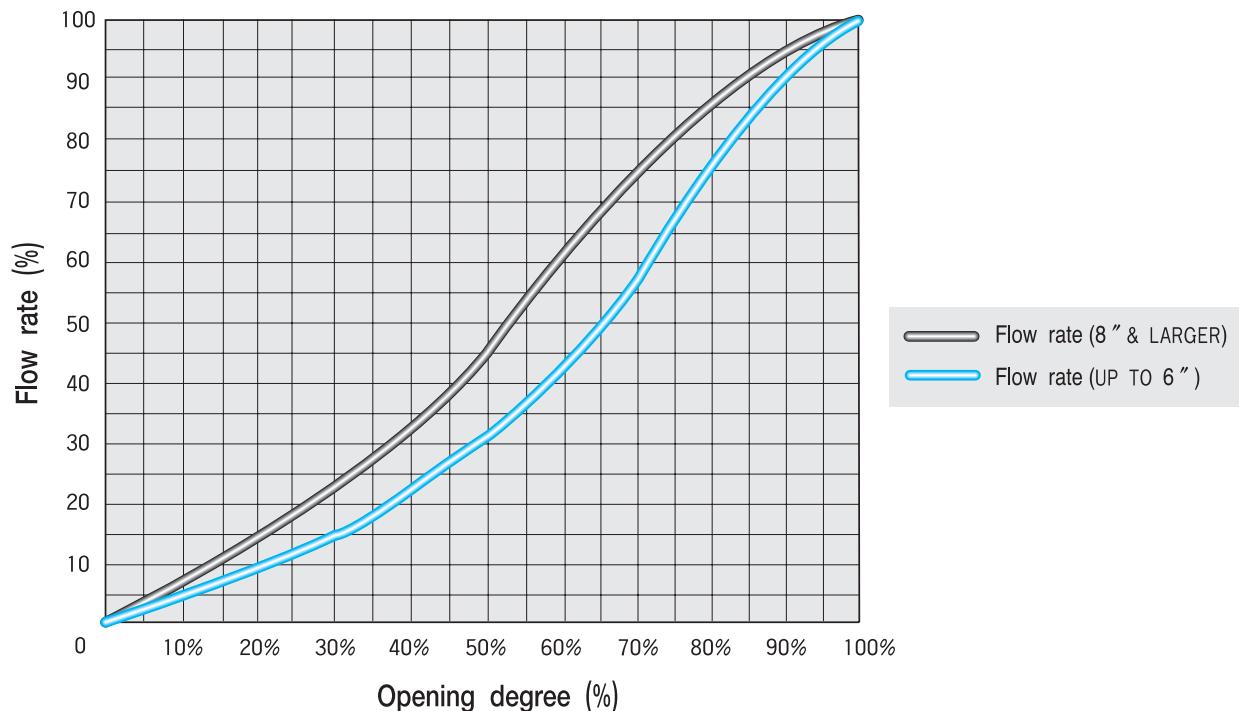

$$Q = Cv \sqrt{\Delta P}$$

### FLOW COEFFICIENT VALUE (Cv)

\* The torque shown in the above chart is actuator sizing torque at the maximum differential pressure.

### APPLICATION

- Nuclear Power Plants and Power Plants
- Oil Refineries and Chemical Plants
- Pulp and Paper, Steel Mills
- Offshore Plants
- Gas Piping and Local Area Energy Supply System
- Ship Building

### INSTALLATION CAUTIONS

- The valve is bi-directional and can be mounted in any position. However, it is recommended that the valve is horizontal to the stem and the inclined cone edge of disc faces toward the downstream (refer to directional arrows and stem side).
- If you want to use at a temperature below -48°C or above 426°C, the extension design shall be applied. In such cases, please contact the Sales Department.

## SPECIFICATIONS—HIGH PERFORMANCE

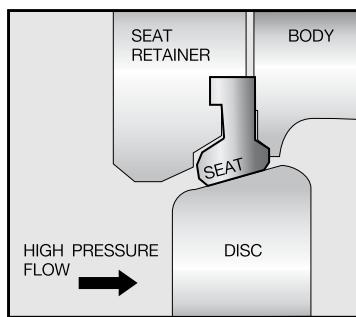

### DESIGN FEATURE

- Designed in accordance with ASME B16.34 or other customer requirements.
- Fire safe design.

## SEAT DESIGN PRINCIPLES—HIGH PERFORMANCE

### STANDARD DESIGN

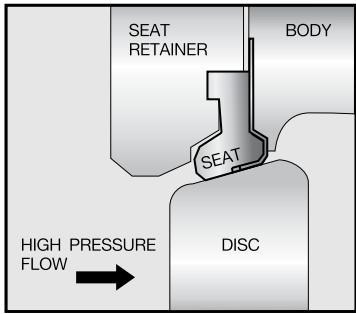

FORWARD FLOW

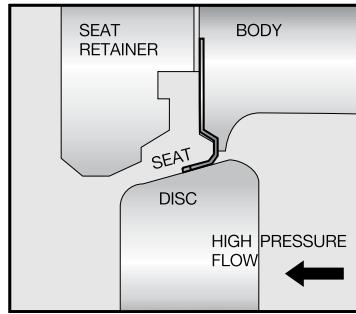

REVERSE FLOW

- Bi-directional flow and shut-off are easily accommodated.
- As pressure increases, seal becomes tighter.

### FIRE SAFE DESIGN

BEFORE FIRE TEST

AFTER FIRE TEST

### SEAT MATERIAL AND WORKING TEMPERATURE

SEAT MATERIAL	MAX. WORKING TEMPERATURE °C (°F)
PTFE	200 (392)
RTFE	250 (482)

### SEAT LEAKAGE

- Leakage soft seated version (PTFE, RTFE) is zero.

	3	DISC	A351-CF8 + ENP or HCr. A351-CF8 + Stellite No. 6		A351-CF8M + ENP or HCr. A351-CF8M + Stellite No. 6	1 Note 1 Faced
	6	PACKING		Graphite		1 Set
	11	BUSH BEARING		A240-316		1
	15	GASKET		Graphite		

#### NOTE:

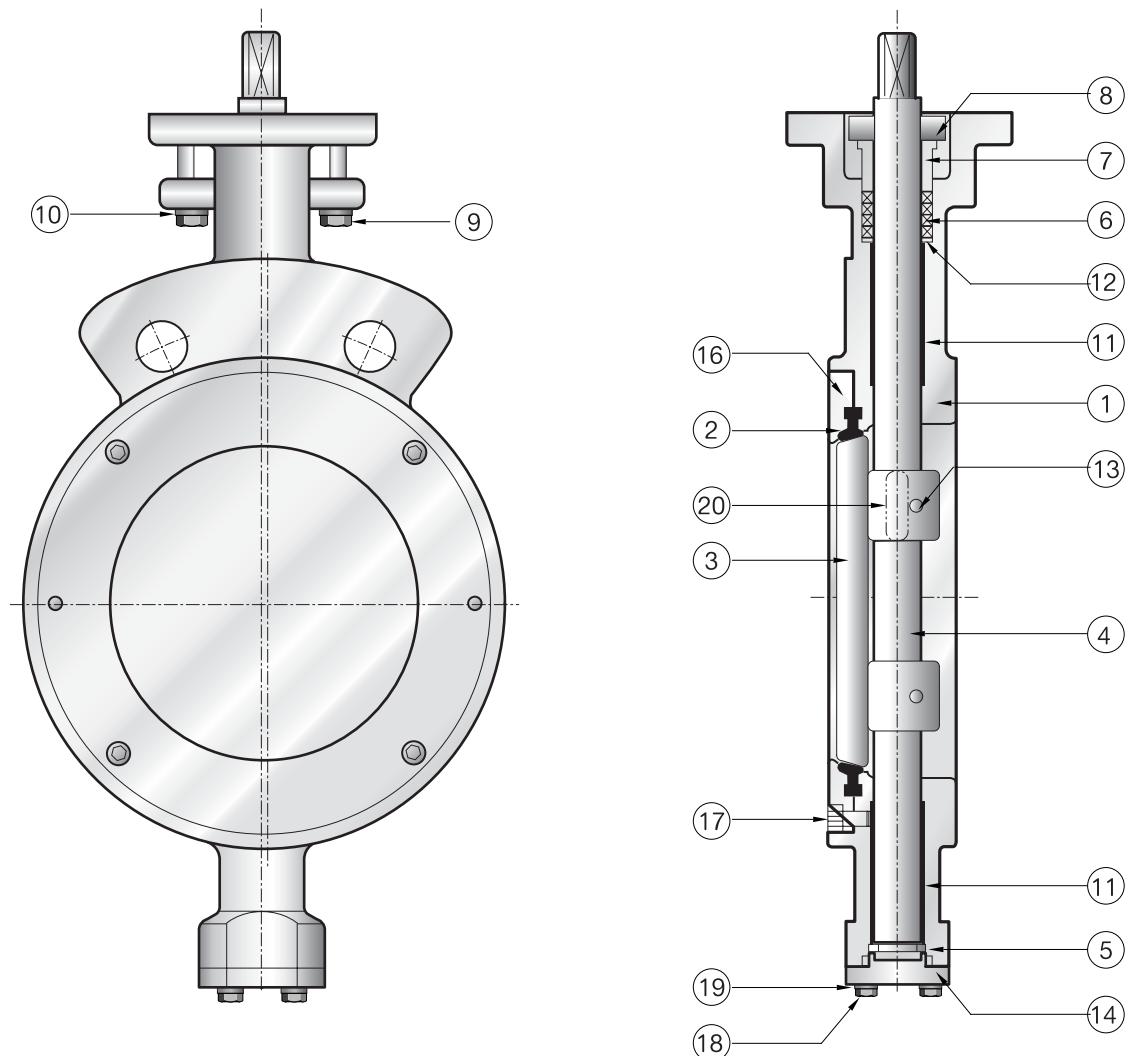

1. HCr: Hard Cr Plating; ENP: Electroless Nickel Plating
2. Part No. 20: For 8" and larger size
3. RTFE: Reinforced PTFE

#### FEATURES:

- Bubble tight shut-off
- Light weight, compact size and easy installation
- General application valve
- No flange gasket
- Easy replaceable seat
- Application:
  - Chemical processing
  - Power plant
  - Hydrocarbon processing

### SEAT MATERIAL AND WORKING TEMPERATURE

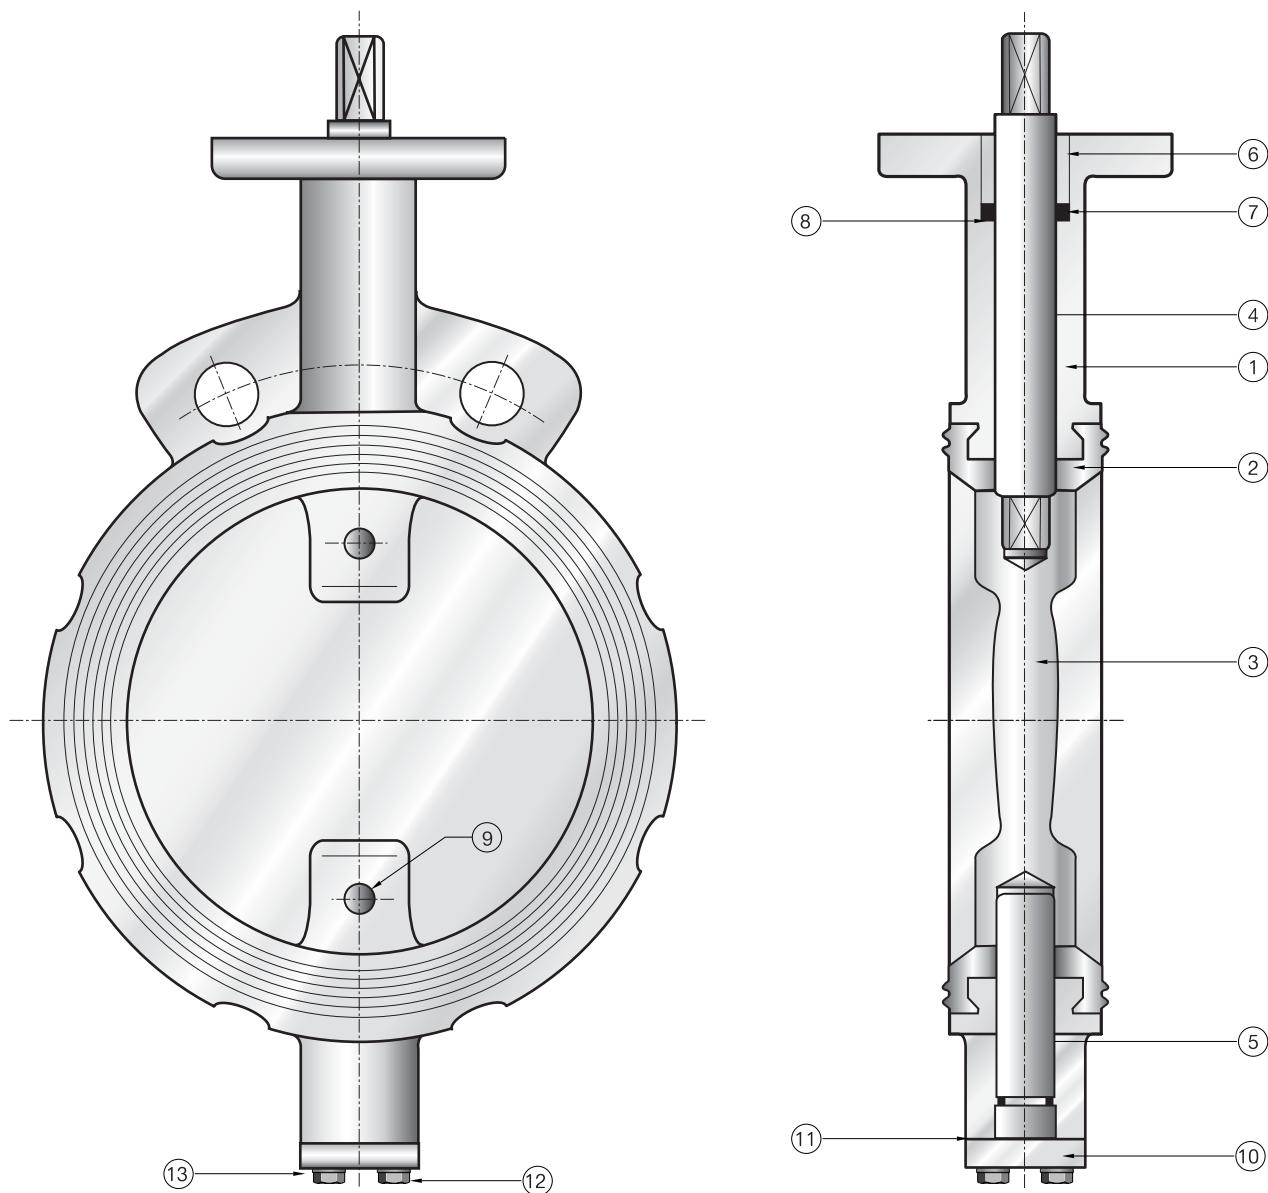

SEAT MATERIAL	MAX. WORKING TEMPERATURE °C	
	CONTINUOUS	INTERMITTENT
BUNA-N (NBR)	-18° C ~ 93° C	-18° C ~ 100° C
EPDM	-40° C ~ 130° C	-40° C ~ 140° C
VITON	-18° C ~ 200° C	-18° C ~ 210° C
NEOPRENE	-16° C ~ 90° C	-16° C ~ 100° C

### FEATURES:

- Bubble tight shut-off
- Light weight, compact size and easy installation
- General application valve
- No flange gasket
- Bi-directional mounting
- Easy replaceable seat
- Application:
  - Chemical processing
  - Oil field
  - Power plant
  - Hydrocarbon processing
